

Uterine cannula and manipulator range

Single use 'Spackman' style

Sheffmed Cannula & Manipulator range

The Sheffmed Uterine Cannula & Manipulator range are single use devices designed to replace reusable 'Spackman' style cannula.

It is virtually impossible to guarantee effective decontamination of the reusable cannula due there design. This is major concern to CSSD departments, operating theatre personnel and most importantly patient safety.

Now you have a choice.

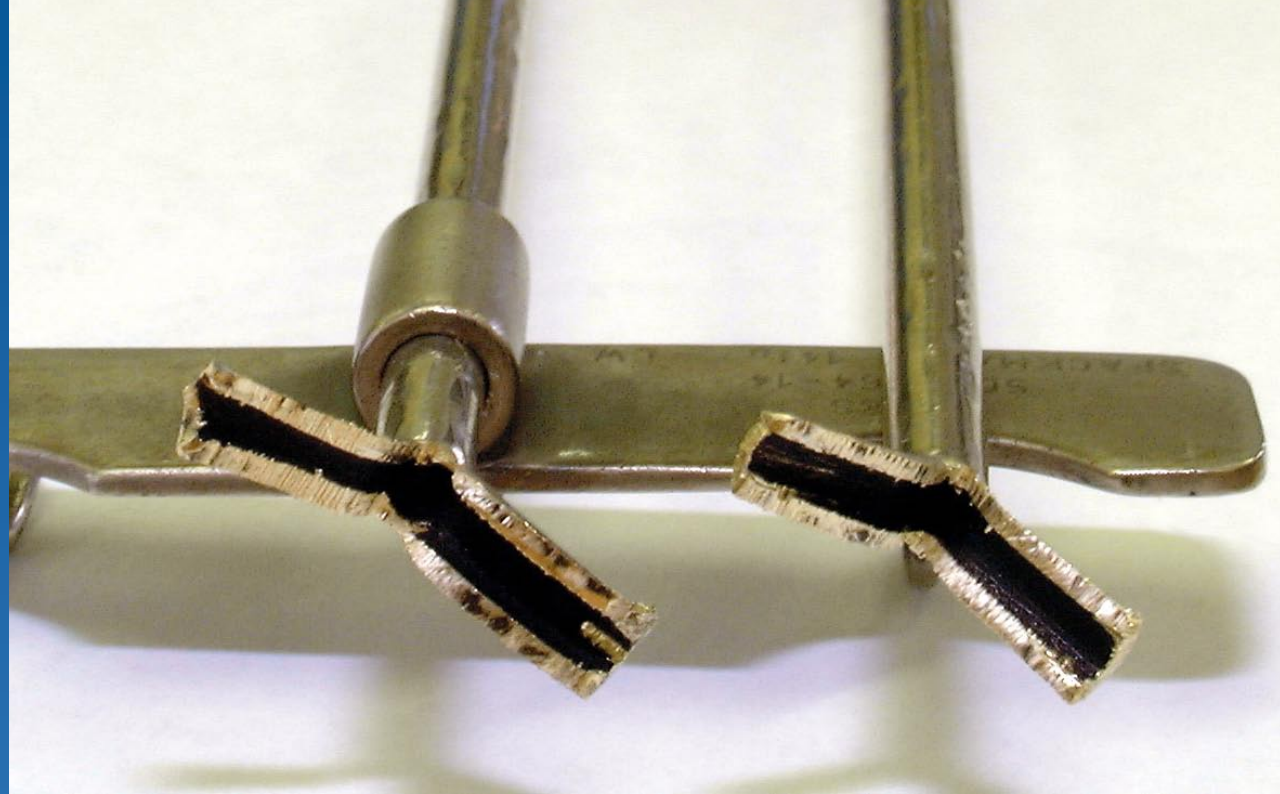

The Sheffmed range includes a traditional 'Spackman' style cannula together with a new cannula that incorporates a unique locking device for ease of use.

A unique and innovate Manipulator provides all the advantages of the Spackman design together with a fully moveable head; this allows surgeons to lift the uterus in all positions while facilitating the introduction of fluid.

Simple yet effective.

Ordering information

- | | |
|-----------|--|
| P11-400 | Cannula Black
(sterile packed box of 25) |
| TG32-294R | Cannula 'Spackman' style metal
(sterile packed box of 10) |
| TG32-400 | Manipulator 'Spackman' style metal
(sterile packed box of 10) |

The view inside this cannula shows how ineffectively reusable instruments can be decontaminated.
